

CRUDE OIL ANALYSIS

Get a representative sample every time and true insight into crude oil quality and composition with an advanced crude oil analysis from one of the most trusted names in the business.

Downstream stakeholders leave no room for error in determining crude oil market value and system compatibility. And when it comes to accurate crude oil analysis, nobody has it down to a science like SPL. Whether selecting which sampling method to run or ensuring responsible analysis with a timely delivery, our team has been the industry standard in crude oil analysis for decades.

Using experienced personnel and the most stringent sample protocols in the industry, SPL offers most ASTM crude oil analysis methods, including ASTM D2892 and ASTM D5236M. Basic crude oil test packages cover:

- API Gravity
- Total Sulfur Content
- Asphaltenes
- Viscosity
- Vapor Pressure
- Paraffin Content
- Water Content
- Sediment

A value-added complement to SPL's comprehensive liquid measurement services, this essential data is critical to marketing hydrocarbons the right way and ensuring accurate liquid allocation. With more than 250 available tests and 50 chemical analysts, SPL can help you streamline crude oil measurement, analysis and marketing throughout the lifecycle. For more information, contact info@spl-inc.com or call (877) 775-5227.
